# Introduction

SafetySkills interactive, web-based courses are designed to ensure that companies meet their regulatory training requirements and employees learn best safety practices. These courses make personnel aware of the wide range of hazards found in industrial environments and provide the critical knowledge, skills and abilities they need to work safely.

## Effective Training

Learning is not a spectator sport. In order to learn, the learner must be engaged. Taking a SafetySkills course is a “front-of-the-seat” experience; our courses contain rich, professionally produced media including 2-D Flash and 3-D animations and simulations, as well as studio-produced audio narration.

## Ensuring Competency

It is not enough that your employees receive their critical compliance training; you need to know that they learned. Our “competency-based” approach is designed to verify that your employees have obtained the required HR and EHS competencies.

## Accurate, Effective and Current

As a client, your company can take advantage of this offering and be assured of our commitment to continually update these courses to make sure they include future regulatory changes and advancements in industry standards.

## SCORM 1.2 Compliant

All SafetySkills courseware is SCORM 1.2 compliant and will integrate with your SCORM 1.2 compliant learning management system. Our courses have been deployed on all major platforms including: Oracle (PeopleSoft), SAP, Saba, Moodle, Skillport, Plateau, and many others.
